THE SELECTED PAPERS OF
SIR ALAN FERSHT
Development of Protein Engineering

Editors

Alan R Fersht
University of Cambridge, UK

Qinghua Wang
Baylor College of Medicine, USA

Imperial College Press
Contents

Preface viii
Acknowledgments vii
Papers Reproduced xi
List of Colour Photos xv

1. Brief Biographical Introduction 1
2. The Early Research Years: Influence of William P. Jencks 5
3. Early Independent Work: Enzymatic Catalysis 15
4. Non-covalent Interactions in Enzyme Catalysis 42
5. Textbook: Enzyme Structure and Mechanism 55
6. Aminoacyl-tRNA Synthetases: Limits of Specificity and Editing Mechanisms 59
7. Protein Engineering: A Once in a Lifetime Opportunity 74
8. Catalysis, Specificity and Non-covalent Interactions 100
9. Structure–Activity (Rate-Equilibrium or Linear-Free-Energy Relationships) in Mutated Proteins 126
10. MRC Centre for Protein Engineering, 1991–2010 143
11. Protein Folding: Stability 146
12. Protein Folding: Pathways and Φ-value Analysis 187
13. Chymotrypsin Inhibitor 2: Two-state Folding and the Nucleation-Condensation Mechanism 224
15. Combining Experiment and Simulation 275
16. The Molecular Chaperone GroE 296
17. Protein–Protein Interactions 316
18. Tumour Suppressor p53: Protein Stability and Cancer 326
19. p53 Structural Studies 354
20. Some Reflections 361
